SUMMARY

Systems Engineer (2026) who designs, builds and ships production AI and SaaS products end to end: multi-agent LLM backends, Next.js frontends and GCP infrastructure with CI/CD. AI Engineer at BIT Automatizaciones, where I built and run AISHOW, a ticketing platform live with real events, and technical co-founder of GP Intelligence.

WORK EXPERIENCE

BIT Automatizaciones — Argentina

May 2026 – Present

AI Engineer

- **Lead engineer of AISHOW (alshow.com.ar)**, an event ticketing platform in production with a reseller client: **2 live events completed and 3 more scheduled**. Wrote 97% of the codebase (199 of 206 commits in 3.5 months) and own 5 production services: a FastAPI + MongoDB API, two Next.js 16 / React 19 frontends, an AI sales agent and a Caddy reverse proxy with a Go sidecar.
- **Payments without overselling**: atomic stock reservation, idempotent MercadoPago webhooks, Decimal rounding and expiry windows designed so a late payment always finds stock or is refunded.
- **AI sales agent** on WhatsApp Cloud API and web (SSE): 12+ tools gated by channel and identity, full purchase through chat, phone OTP verification and a cache-friendly prompt that made it about 10× cheaper.
- **Security**: in-house JWT auth with 4 roles, private Cloud Run services called with per-service-account ID tokens, Secret Manager, and JWT-signed QR tickets that cannot be forged.
- Door-scanning PWA with a 5-minute offline mode and idempotent ticket validation.
- Migrated from Railway to GCP Cloud Run (2 isolated environments, reproducible infrastructure scripts, Cloud Tasks and Scheduler). Full test pyramid (pytest, Vitest, Playwright e2e) plus k6 load tests.
- Also: multi-agent systems with LiteLLM model routing and MCP tool integration, WhatsApp assistants with AI-based OCR, open-weight LLM benchmarking, and reusable Claude Code skills for spec-driven development.

GP Intelligence — Córdoba · gpintelligence.com.ar

Jan 2026 – Present

Technical Co-founder & Lead Engineer (part-time)

- Sole technical owner of a SaaS platform for financial advisors and broker-dealers, deployed and in pre-launch: product, architecture, code, infrastructure, security and cost.
- GCP architecture: 6 Cloud Run services, Cloud SQL Postgres, Firestore, GCS, Secret Manager, Cloud Tasks and 9 scheduled jobs, across 3 environments with GitHub Actions CI/CD and nightly Playwright E2E tests.
- FastAPI backend integrated with the broker-dealer's API; Next.js 15 + React 19 + TypeScript frontend with a server-side BFF, installable PWA and push notifications.
- In-house AI agent: orchestrator plus 5 specialists over real portfolio data, with streaming, audio transcription, per-user quotas and routing across Gemini, Claude and DeepSeek.
- Integrations: WhatsApp Cloud API with HMAC-validated webhooks, Gmail / Calendar / Meet via OAuth, Amazon SES (50,000 daily sends approved) and meeting bots with transcription and summaries.

EPAM Systems — Argentina

Jun 2025 – May 2026

Systems Engineer Junior (Jan – May 2026) · Cloud & DevOps Trainee (Jun – Dec 2025)

- Cloud work on GCP and AI testing.
- Intensive Cloud & DevOps program: AWS (EC2, S3, Lambda, IAM, VPC, CloudFormation), Terraform, Ansible, Docker, Kubernetes, CI/CD with Jenkins and GitHub Actions, Linux and Bash.

Bircle AI — Argentina

Mar 2024 – Nov 2024

Full Stack Developer Junior

- Built backend services in Python (FastAPI) and Express.js, and frontends in React / Next.js with TypeScript and Tailwind CSS.
- Designed and consumed REST APIs, worked with MongoDB and SQL databases and with AWS services.

PROJECTS

Presupuestá — Founder · presupuestaa.com.ar

2026 – Present

- SaaS for tradespeople in Argentina to create and send professional quotes. Built and launched solo; now running user acquisition with content and paid ads.

- Web and mobile app to run the university cafeteria: product search, cart, Mercado Pago payments and an admin panel. FastAPI, Firestore, Next.js and Firebase Auth, deployed on Cloud Run and Vercel with GitHub Actions.

SKILLS

AI & Agents: LLM orchestration (LiteLLM), MCP, multi-agent architectures, tool calling, OCR with vision models, Google Vertex AI, Claude Code

Backend: Python, FastAPI, Node.js, TypeScript, REST APIs

Frontend: React, Next.js, Tailwind CSS, PWA

Cloud & DevOps: GCP (Cloud Run, Cloud SQL, Firestore, Secret Manager, Cloud Tasks), AWS, Docker, Terraform, Kubernetes, GitHub Actions

Databases: MongoDB, PostgreSQL, Firestore, MySQL

Testing: pytest, Vitest, Playwright, k6

EDUCATION

Universidad Católica de Córdoba — Systems Engineering

Graduated Feb 2026

LANGUAGES

Spanish (native) · English (advanced, B2 – Cambridge First Certificate)

OTHER EXPERIENCE

Vail Resorts, USA — Ski equipment sales and rental, customer service in English (Winter 2022/23)
